**AUDIOGRAM**

**Apparecchi**

At AUDIOGRAM our aim is to reproduce the magic of the listening experience in the most natural way by recreating the feelings and the emotion that music can bring. The technical solutions and design choices we adopt for our products are aimed to achieve that goal.

With this basic philosophy and armed with our firm belief in the ideal of natural sound, AUDIOGRAM has produced a series of products which are the result of years of study and research. These products bring together some very different design and manufacturing skills, not only in electronics but also in other quite separate fields of technology. An ongoing collaboration between designers with these very different but complementary skills has enabled us to turn radical ideas and techniques into innovative products which you can listen to today. AUDIOGRAM products have been well-known and respected both in Italy and abroad for many years. The range of products includes integrated amplifiers, pre- and power-amps, electrostatic loudspeakers and CD-players.

Following closely to our original ideal of making superbly musical products with user-friendly features and having a long and reliable life, the AUDIOGRAM CD-A was created.
